

SYSTEM, METHOD AND COMPUTER PROGRAM PRODUCT FOR MANAGING PATIENT INFORMATION

ABSTRACT OF THE DISCLOSURE

5 A system, method and computer program product are provided for managing at
least one patient record, each patient record including patient information. The system
includes a patient processor, an administrator processor coupled to the patient processor
across a network, and an electronic database coupled to the administrator processor. The
patient processor capable of receiving patient information for a patient record, and storing
10 the received patient information in a queue. In turn, the administrator processor is
capable of receiving a determination whether to accept or reject the patient information in
the queue. If the patient information is accepted, the electronic database is capable of
storing the patient information.
